Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the Specification.

Listing of Claims:

1-20.   (Cancelled)

21. (Currently Amended)   A method for delivering content playback related information between devices on a network, the method comprising:

obtaining state information from at least two services utilized ~~involved~~ in the playback of the content, the at least two services comprising an AV Transport service and a Rendering Control service; ~~the state information comprising information related to data transport control of the content and information related to rendering states in which data of the content is rendered;~~ and

invoking an action to a device to store the state information in the device, ~~wherein~~ the state information ~~is included~~ being included in the action as an input ~~argument; and~~ argument,

~~storing the state information in the device according to the action,~~ wherein the stored state information is later utilized in setting corresponding states of services to resume playback of the content.

22-23. (Cancelled)

24. (Currently Amended)   The method of claim 21, wherein the state information obtained from the AV Transport service ~~related to data transport control of the content~~ includes control information to be used for ~~late~~ later playback of the content from a position where playback of the content is stopped.

25. (Previously Presented)   The method of claim 21, wherein the device includes at least one service among the at least two services.

26. (Currently Amended)   A system for delivering content playback related information, the system ~~embedded in a network~~, comprising:

a server <u>configured</u> for storing content;

a device <u>configured for</u> including <u>a Rendering Control</u> ~~at least one~~ service; and

a control point <u>configured</u> for controlling the server and the device, wherein the control point <u>is further configured to</u>:

~~obtains~~ <u>obtain</u> state information from the at least two services <u>utilized</u> ~~involved~~ in the playback of the content, the at least two services comprising <u>an AV Transport service and the Rendering Control Service</u>, ~~the at least one service, the state information comprising information related to data transport control of the content and information related to rendering states in which content data is rendered;~~ and

~~invokes~~ <u>invoke</u> an action to the server to store the state information in the server, <u>the stored state information being later utilized in setting corresponding states of services to resume playback of the content,</u> wherein the state information is included in the action as an input argument.

27. (Currently Amended)   The system of claim 26, wherein the server <u>is configured to store</u> ~~stores~~ the state information according <u>to</u> the action.

28-29. (Cancelled).

30. (Currently Amended)   The system of claim [[29]] <u>26</u>, wherein the server <u>or the device is configured to include</u> ~~includes~~ the AV Transport servic~~e and the device includes the Rendering Control~~ service.

31. (Cancelled)

32. (Currently Amended)   The system of claim 27, wherein the <u>state</u> information, stored in the ~~server,~~ <u>server and obtained from the AV Transport service</u> ~~related to data transport control of the content~~ includes control information to be used for <u>later</u> ~~late~~ playback of the content from a position where playback of the content is stopped.

33. (Currently Amended)   The system of claim 27, further comprising a second control point, the second control point configured for reading the state information stored in the server and setting the read state information to a second device.

34-38. (Cancelled).

39. (Currently Amended)   The method of claim 21, wherein the state information obtained from the Rendering Control service ~~related to the rendering states in which data of the content is rendered~~ includes a value about volume.

40. (Currently Amended)   The system of claim 27, wherein the state information, stored in the ~~server,~~ server and obtained from the Rendering Control service ~~related to the rendering states in which data of the content is rendered~~ includes a value about volume.

41-42. (Cancelled)

43. (New)   The method of claim 21, wherein the AV Transport service and the Rendering Control service are defined by UPnP system.

44. (New)   The system of claim 26, wherein the AV Transport service and the Rendering Control service are defined by UPnP system.

45. (New)   The method of claim 21, further comprising:
adjusting a time offset for the playback of the content on a rendering device according to time information obtained from the state information delivered by the device.

46. (New)   The system of claim 26, wherein a time offset for playback of the content is adjusted on a rendering device according to time information obtained from the stored state information delivered by the server.
